

Chase Burkhalter

Senior Analytics Engineer • Data Engineer • AI-Ready Data Infrastructure

chase@chaseburkhalter.com • (334) 333-4308 • Dothan, AL (Open to Remote) • [linkedin.com/in/chaseburkhalter](https://www.linkedin.com/in/chaseburkhalter)

PROFESSIONAL SUMMARY

Senior analytics engineer with 6+ years building and scaling the analytics layer in modern data stacks, with deep expertise in dbt, Snowflake, and Fivetran from source ingestion through production-grade semantic modeling. Recent work spans three areas in high demand today: cutting cloud warehouse costs through incremental modeling and pipeline re-architecture, building AI-ready data foundations through governed documentation, custom MCP servers, and semantic context layers, and automating recurring data workflows with custom Python tooling. Pairs software-engineering rigor (version control, CI/CD, testing, documentation) with close stakeholder partnership and a consistent focus on measurable outcomes.

CORE SKILLS & TOOLS

Analytics Eng.	dbt (Core & Cloud), Snowflake, Fivetran, Hightouch, Airflow, MetricFlow, Semantic Layer Design
AI & LLM Tools	MCP Server Development (FastMCP), Claude AI, Claude Code, Hex AI, LookML to Semantic Context Layers, Prompt Engineering, AI-Ready Data Design
Programming	SQL, Python, JavaScript / TypeScript, Jinja, LookML, React, Next.js, Jupyter
Data Infra	AWS (Lambda, S3, Redshift, Glue), BigQuery, Docker, MongoDB, Postgres, Kafka
BI & Analytics	Looker / LookML, Amplitude, Hex, Tableau, Power BI, Apache Superset, Chartbeat, Mixpanel
Instrumentation	Google Tag Manager, GA4, Segment, AppsFlyer, Airship, Avo, DataHub, OpenMetadata, Pendo
Mar. & Product	Iterable, Braze, Stripe, Salesforce, HubSpot, LaunchDarkly, Optimizely, FullStory, Qualtrics
Methodologies	Incremental Modeling, Data Lineage & Governance, CI/CD, A/B Testing, Cohort Analysis, Dimensional Modeling

PROFESSIONAL EXPERIENCE

Future Research, Inc. | Remote
Senior Analytics Engineer (Contract)

February 2026 – May 2026

- **Cut Snowflake compute costs by roughly 80%** by re-architecting high-cost dbt models from full-refresh to incremental builds, sustaining the savings as query volume grew over the same period.
- **Built an AI-ready analytics foundation**, persisting governed model and column documentation into Snowflake, developing custom MCP servers, and generating a LookML-derived semantic context layer for both AI tools and BI consumers.
- **Launched a natural-language data access integration**, connecting Claude directly to the production Snowflake environment with scoped, least-privilege access so non-technical stakeholders could query governed data without writing SQL.
- **Owned end-to-end source-to-warehouse integrations** for Intercom, Amplitude, Iterable, and Google Search Console, handling ingestion, identity resolution, and downstream modeling from raw source to production-ready marts.
- **Led data quality audits and incident response** for core subscription and marketing reporting, resolving a multi-day, billion-row vendor replication failure and a recurring permissions issue that had been silently breaking downstream syncs.
- **Automated recurring manual data workflows**, replacing spreadsheet-dependent processes with scheduled, API-driven pipelines and eliminating a chronic source of stale data.

The Atlanta Journal-Constitution | Atlanta, GA (Hybrid)

August 2024 – June 2025

Senior Data & Analytics Engineer

- **Promoted from Senior BI Analyst to Senior Data & Analytics Engineer** within six months, in recognition of expanding ownership of the company's data platform and engineering practices.
- **Owned the end-to-end rollout of Amplitude analytics across 7 digital properties**, independently handling JavaScript instrumentation, taxonomy design, QA, and ongoing governance to establish the company's first unified behavioral analytics layer.
- **Migrated core event tracking and reporting from Redshift to Snowflake**, improving query performance for editorial and executive dashboards and building a more scalable, cost-efficient foundation for downstream analytics.
- **Rebuilt the GTM/GA4 tracking infrastructure from the ground up after a team restructuring**, assuming sole ownership of tagging, debugging, and data QA across all web properties with no handoff documentation to work from.
- **Integrated Airship, AppsFlyer, and Iterable into the analytics stack**, partnering with product and platform teams to unlock cross-platform engagement reporting that hadn't previously existed.
- **Built Power BI and Tableau dashboards for election and campaign coverage**, giving editorial and executive leadership faster, more reliable performance reporting during high-stakes news cycles.

Shortcut | New York, NY (Remote)

October 2022 – May 2024

Senior Data Analyst

- **Served as the sole analyst supporting 6 cross-functional departments**, including sales, finance, marketing, product, engineering, and customer support, owning the full analytics workflow from requirements through delivery.
- **Drove \$100K+ in annual savings** by independently evaluating and executing a full migration off proprietary visualization tools to Apache Superset, with zero loss of reporting coverage.
- **Administered the company's entire modern data stack solo**, including Segment, Amplitude, Superset, Google Analytics, Snowflake, dbt, Fivetran, Hightouch, and Pendo.
- **Built and maintained reporting models in SQL and dbt** from first- and third-party data sources, becoming the primary source of trusted insight for finance, sales, marketing, and product stakeholders.
- **Standardized event-tracking processes across teams**, establishing shared definitions that enabled non-technical stakeholders to self-serve customer behavior analysis.

SteadyApp / SteadyIQ | Atlanta, GA (Remote)

March 2020 – September 2022

Product & Data Analyst

- **Saved \$1.4M annually** by analyzing roughly 3 billion transactions and associated fraud indicators to redesign the company's data-aggregator infrastructure, minimizing data loss while cutting processing cost.
- **Managed the company's core analytics stack**, including Segment, Amplitude, Tableau, Braze, and Extol, serving as the primary technical resource driving data-informed decisions across product, growth, and executive teams.
- **Built and maintained source-of-truth reporting models in Snowflake via dbt**, replacing inconsistent ad hoc reporting with scalable, reliable models that executive stakeholders trusted without re-verification.
- **Designed data governance plans and tracking strategies** for new feature launches, UX optimizations, and A/B testing initiatives, establishing measurement frameworks before features shipped rather than after.

EDUCATION

The University of South Alabama | Mobile, AL

May 2017

B.S. Biology / Biochemistry
